company

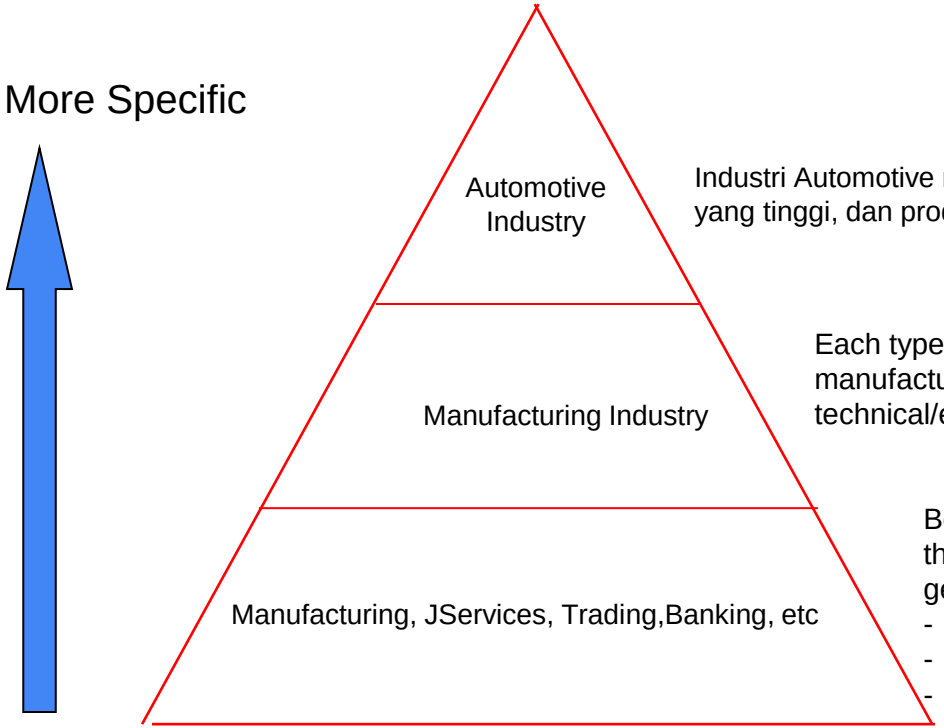

Consulting more than
60% Automotive
Industry in Indonesia
for IATF Certification

BACKGROUND

Rapidly developing technological advances have resulted in rapid business developments and changes and are full of various uncertainties with increasingly fierce competition. For this reason, a business must be able to adapt itself to various developments that occur. Likewise, in the automotive business. Various demands for international standardization to enter the automotive industry are unavoidable, companies must be able to compete globally to produce products according to market needs and satisfy their consumers. In the automotive industry, it is known as the international standard IATF 16949: 2016 specifically for producing products with high accuracy, of course, the product must be safety, prioritizing the safety of its users.

BACKGROUND

The IATF standard 16949:2016 is specific to the automotive industry, among other industry standards

Industri Automotive memerlukan tingkat ketelitian yang tinggi, dan produknya adalah produk safety

Each type of industry is unique each. The manufacturing industry requires better technical/engineering knowledge

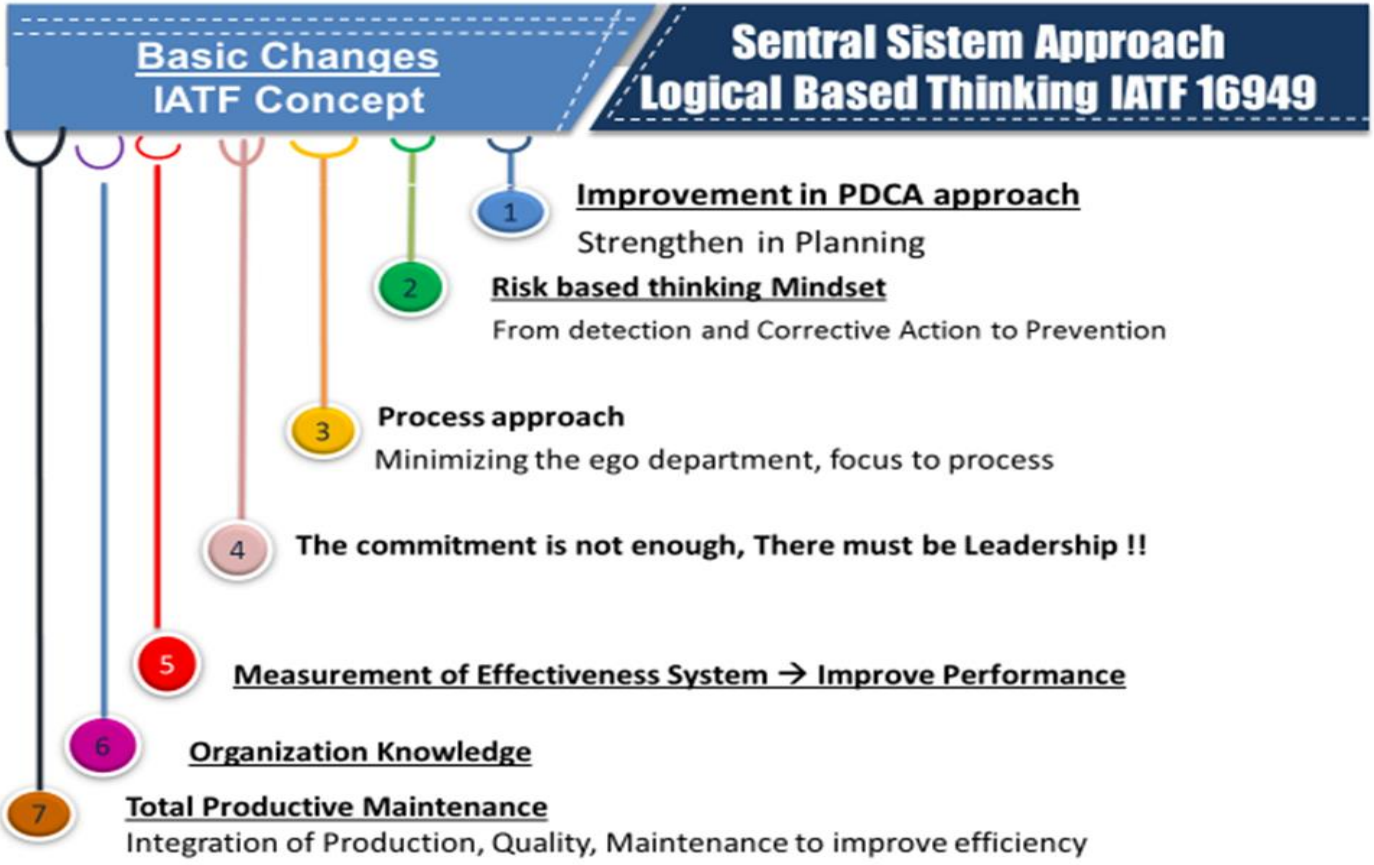

Because it must cover all types of business, then standard requirements are made more general:

- Make products according to the customer
- Wishes to Improve company performance
- Increase customer satisfaction

ISO 9001:2015

1. Refer to ISO 9001:2015
2. Adding requirements to ISO 9001:2015 according to automotive-specific needs:

- The development of the automotive business, which has the longest business chain link with the global business system
- Study the trend of audit findings on the previous standard, namely ISO/TS 16949
- Supporting flawless production
- Supports Just In Time production system

Basic Changes
IATF Concept
Sentral Sistem Approach
Logical Based Thinking IATF 16949
1
